Stunning fabrics and designs that co-ordinate with Resene wall colours

At last, a range of curtain fabrics especially created to go with the Resene wall colours you love! Resene has hand selected this collection of contemporary, classic and trend-setting fabrics, co-ordinating each one with suggested Resene wall colours.

We've taken the guesswork out of decorating so you can enjoy selecting Resene curtains and complementary Resene paints with confidence.

▣ Resene curtains - made to order

Our Resene ColorShops can organise fabric to be made into curtains for you. Choose from pencil pleat, dutch pleat, inverted pleat or roman blinds.

Pencil pleat

Dutch pleat

Inverted pleat

Roman blind

Step 1 Select your Resene Curtain Collection fabric and note the design, colour and price group on the order form, along with your details.

**Step 2** Follow the 'How to measure' guide and note your measurements on the order form.

Step 3 You can order your curtains either in store or online at **www.resene.com/curtains**. Resene ColorShop staff can confirm pricing for you, or you can view pricing online at **www.resene.com/curtainpricing**.

How to measure curtains

Step 1
Measure the width of your curtain track - write this measurement into the 'track width' section on the order form.

If you are measuring for a new track, we recommend that you add 20cm to both sides of the window measurement to allow for the curtains to be stacked back - leaving the window clear, when curtains are opened.

Track

Window frame

Curtain length

Step 2
To measure for the curtain drop, measure from the top of the track to the point where the curtains will end. Write this measurement into the 'curtain length' section on the order form.

For the length/drop the curtain will be made to the nearest centimetre. For the width, the curtain will be made to fit the band of measurements indicated, not the exact width of your track. This is to allow for gathers in the fabric so it sits nicely on the window.

▣ Custom make - via a Resene Curtain Specialist

Many curtain specialists can assist with measuring, and installing your curtains or roman blinds. Find your nearest Resene curtain stockist online, **www.resene.co.nz/curtainstockists**.

▣ Fabric and Cushions

You can also purchase fabric by the metre in your chosen fabric. Cushions are also available in selected fabrics.

Always double check your measurements.

See the Resene website www.resene.com/curtains
to watch our how to measure and hang Resene curtains video.
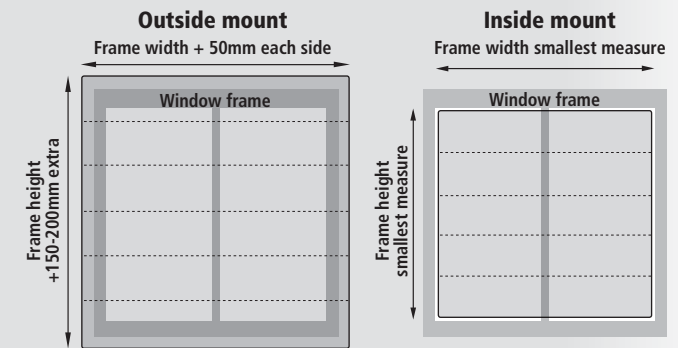

How to measure roman blinds

Your roman blind can either fit inside the window frame – inside mount - or be the same width to cover the window – outside mount.
Outside mount will give you the better thermal properties and help to block out more light. Inside mount may be preferred where there is limited space and there may be obstructions for an outside mount.

Outside mount - measuring:

Width: To cover the window frame, measure from the outside left edge of the window frame to the outside right edge of the window frame at the top, middle and bottom of the window. Use the largest measurement. Add 100mm to your width measurement so your blind sits 50mm either side of the window frame. If there are objects close to the window that would block the blind, adjust the width as needed.

Height: To cover the window frame, measure from the outside top edge of the window frame to the outside bottom edge of the window frame on the left, middle and right hand sides. Use the largest measurement. Add 150-200mm to your frame height measurement so your blind sits off the window when open. If there are objects close to the window that would block the blind, adjust the height as needed.

Inside mount
Frame width smallest measure

Window frame

Frame height smallest measure

Inside mount - measuring:

Width: To fit inside the window frame, measure the inside of your window from one side to the other at the top, middle and bottom of the window. Use the smallest measurement.

Height: Measure from the top to bottom of the inside of your window frame on the left, middle and right hand sides. Use the smallest measurement.
